- 36" & 42" models features single mounting position

EXCAVATOR  
ATTACHMENTS

Using the long tried and proven drive system from our skid steer cutter model, this new unit is now available for mini excavators. The unique mounting design allows 2 different mounting points (50" unit only) for using in different applications. This allows for working close in to your machine or reaching far out. The extremely rugged direct drive system with a large flywheel that stores energy, keeps the blades cutting even in difficult conditions. The 36" and 42" models use a 3 blade system and straight blades to give better cutting capabilities than the competitive units.

**APPLICATIONS:**

- Mowing steep banks
- Mowing around ponds
- Cutting back brush
- Reaching over fences
