

For: Wheel Loaders Type: Buckets

Applications: Recycling Storm Clean-up Waste Handling

Features At-A-Glance

- Bucket width and edge hold pattern made to accept specific OEM standard wear parts.
- Bucket profiles available in full, half-cutaway, full-cutaway, and crescent moon styles for better pile penetration.
- Clamp opens vertically -- does not interfere when loading near walls.
- Independent clamps for retention of uneven loads, with dual cylinders.
- High strength steel construction.
- Available in Heavy Duty construction for rougher applications.
- Available in pin-on or various coupler hookups (Volvo®, JRB®, etc.).
- These buckets are especially useful in transfer stations, storm/construction clean-up, and various recycling applications.
- Available in 1 to 12 yard capacities.

Trash Buckets with Clamps are a standard general purpose bucket design with dual top clamps for load retention. They are typically used in recycling applications such as wood waste, transfer stations, and also storm clean-up. The endplates are available in different styles to suit the type of material being handled. Loader 3rd function hydraulics are required.
