EGR 2/3 WT

For use in demolition, land clearing, scrap handling, rip-rap, log & pipe handling.

EGR 3/4 WT

For use in land clearing, light demolition, scrap and loose material handling.

EGR 4/5 WT

Ideal for handling loose material, general waste, refuse, and wood waste.

Our "EGR Wide Tine" grapples come in sizes to fit everything from a tractor/loader/backhoe through a 200,000 lb. excavator. Heavy duty boxed tines are constructed of high strength materials for long life even under severe conditions. The 2/3 tine configuration is used mostly in heavy applications such as demolition, rip-rap, C&D and scrap. The 3/4 tine configuration handles medium duty applications such as light land clearing, loose material and wood waste. The 4/5 tine variant handles your bulk applications such as solid waste handling and light applications in re-handling. Coupler or pin-on, your choice.

MODEL	Approx Excavator Weight (lbs.)	Full Open ¹	Full Close	Height Closed	Width of Upper Movable Jaw	Width of Lower Fixed Jaw	Weight (lbs.)	Tine Configuration
